

*Podiatry, more than you think*

**Podiatrists are university-trained, registered healthcare professionals, and a key member of the allied health workforce.**

Podiatrists are responsible for the diagnosis and management of disorders, injuries and pain affecting the foot, ankle, and lower limbs.

They assess, diagnose and manage a vast range of foot pathology which is often related to disease affecting the whole body, such as diabetes.

Many health problems can affect the feet, so podiatrists are often the first health practitioner to identify a problem.

Join us in celebrating the important work done by podiatrists and learn about the multitude of opportunities within the profession.
