

# Your feet do more than you think.

## So do podiatrists.

**Think podiatrists just look after feet and nails?**  
**Think again.**

- They assess how you walk and run
- They evaluate your footwear
- They request X-rays and ultrasounds
- They prescribe and fit orthotics
- They manage complex foot wounds
- They manage and treat sports injuries
- Some can prescribe medicines
- Some are trained in foot and ankle surgery

**Podiatrists are university-trained registered health professionals who assess and manage a broad range of foot and lower limb concerns.**

**If something doesn't feel right with your foot or lower limb, you don't have to work it out on your own.**

It's difficult to know what's causing the pain, discomfort or change you're experiencing. A podiatrist can help work out what's going on and provide care for a broad range of foot and lower limb concerns.
